## html reference - version 0.5

We are constantly updating this page. If you would like to see additional HTML reference items, please [Contact Us](#) with your request.

Click the link on the left side of the chart to see more information and an example of that property.

Tag	Attributes	Description	Deprecated?
<a href="#"><u>&lt;a&gt;</u></a>	accesskey href name tabindex target type	Create an Anchor for hyperlink navigation. Commonly called just plain "links." It's safe to place images, line breaks, and text between the opening and closing tags.	No!
<a href="#"><u>&lt;address&gt;</u></a>	nil	Create an italic address! Simialr to the <I> tag, but best used for long addresses. Page break and formating tags are still required for proper format.	Yes!
<a href="#"><u>&lt;b&gt;</u></a>	nil	Quickly format text to be bold! This can be done using Cascading Style Sheets, manipulating the font-weight to your preference.	No!
<a href="#"><u>&lt;base&gt;</u></a>	href target	Create a "base" url for all links on the page. This tag must be placed between the head element of your code.	No!
<a href="#"><u>&lt;basefont&gt;</u></a>	color face id name size	Sets a font face, color, and size for the entire page! (Sizes 1-7)	Yes!
<a href="#"><u>&lt;bdo&gt;</u></a>	class id lang style title	Bidirectional Override, changes the direction of <i>all</i> the text flow from right to left or vice versa. This allows for the easy translation of languages such as Hebrew or Chinese.	No!
<a href="#"><u>&lt;blockquote&gt;</u></a>	nil	The output of this tag is browser dependent, common outputs are italics, as well as left and right indents for any of the text placed within this tag. Many other tags function inside this element as well, providing many options to customize the text therein.	No!
<a href="#"><u>&lt;body&gt;</u></a>	alink class background bgcolor id lang link style text title	Place your content within your "body" tags. CSS has made most of the attributes for this tag obsolete, however, browsers continue to recognize them.	No!

	vlink		
<u>&lt;br&gt;</u>	class id style title	Insert a line break, resuming text flow on the next line.	No!
<u>&lt;cite&gt;</u>	class dir id lang style title	Creates "cited" or italic text without paragraph breaks before and after your text. Allows for inline citation of text.	No!
<u>&lt;code&gt;</u>	class dir id lang style title	Quick format to change the text output to "code" text. The resulting text will resemble computer generated code much like a courier font.	No!
<u>&lt;dd&gt;</u>	class dir id lang style title	The definition part of a definition list.	No!
<u>&lt;del&gt;</u>	class dir id lang style title	Strike through text. Cite and date the time of deletion if you desire.	Yes!
<u>&lt;div&gt;</u>	align class dir lang height id nowrap style title valign width	Divide your content, adding specific styles to specific divisions. Group together tables, paragraphs, or headings allowing alterations of groups of different tags at once. For example, changing the language attribute of a <div> tag will alter the language of all tags within the div.	No!
<u>&lt;dl&gt;</u>	class dir id lang style title	Create Definition Lists, beginning with a bold word followed with a definition in italics.	No!
<u>&lt;dt&gt;</u>	class dir id lang style title	The definition term of a Definition List, the word you will be defining.	No!

<u>&lt;font&gt;</u>	class color dir face id lang size style title	Customize fonts within your HTML document. Change colors, fonts, or size.	Yes!
<u>&lt;form&gt;</u>	action class dir id lang method name style target title	Create forms to retrieve user input and data.	No!
<u>&lt;frame&gt;</u>	bordercolor class frameborder height id marginheight marginwidth name noresize scrolling src style title width	Set specifics of a frame within a frameset. Must be placed within frameset tags.	No!
<u>&lt;frameset&gt;</u>	border bordercolor cols class frameborder framespacing rows style title	Define a frameset and few base properties for the frameset.	No!
<u>&lt;h1-7&gt;</u>	align class id lang style title valign	Places a heading onto your document. Heading tags automatically place a page break before and after the closing and opening tags.	No!
<u>&lt;head&gt;</u>	null	Run scripts, place your title, or link to exterior style sheets here. Also, the base tag for links is placed within this element as well.	No!
<u>&lt;hr&gt;</u>	class dir id lang style title	Creates a horizontal rule on the page. Using style sheets, its possible to alter this tag in many ways.	No!

<u>&lt;html&gt;</u>	dir lang	Specifies the start of an HTML document to a Web Browser. Most attributes are being replaced by Style Sheets.	No!
<u>&lt;i&gt;</u>	nill	Use this tag to highlight key words or phrases using italics. Works well to quickly format text. Supported by many browsers.	No!
<u>&lt;iframe&gt;</u>	align class frameborder height id marginheight marginwidth name scrolling src style title valign width	iFrames are windowed frames allowing for viewing of multiple HTML documents through a single window browser. Supported by numerous browsers.	No!
<u>&lt;img&gt;</u>	align alt border class dir height hspace lang name src style title valign vspace width	Place images onto your website. Use any of the listed attributes and style sheets to perfect the output of your image on your site.	No!
<u>&lt;input&gt;</u>	accesskey class checked dir disabled id lang maxlength name readonly size style tabindex title type value	Input tags are used with forms to retrieve user data. From buttons, to text fields, or checkboxes. Specify using the type attribute.	No!
<u>&lt;li&gt;</u>	class dir id lang style title type value	Used to create list items of HTML lists. Must be placed within <ul> or <ol> tags.	No!

<u>&lt;link&gt;</u>	class dir lang href rel style title type	Link exterior documents to your websight. Keep code neat and clean linking other elements to your site. Use a seperate link tag for each link	No!
<u>&lt;meta&gt;</u>	content dir lang name	Place a description and keywords of your site within the head element of your HTML document; this is a way for search engines to pick up your site for others to hit.	No!
<u>&lt;noframes&gt;</u>	class dir id lang style title	Place text within this tag for browsers that do not support the use of frames.	No!
<u>&lt;noscript&gt;</u>	class dir id lang style title	Add a line of text for browsers unable to support scripts.	No!
<u>&lt;ol&gt;</u>	class dir id lang start style type title	Create Ordered Lists, within you HTML documents. An Ordered List is a numbered list with predefined indents and spacing.	No!
<u>&lt;option&gt;</u>	class dir disabled id selected style title value	Add options to be selected by the viewer with your Select Forms. Must be placed within a "Select" tag.	No!
<u>&lt;p&gt;</u>	align class id lang style title	Begins a paragraph placing a line break before the beginning tag and after the ending tag.	No!
<u>&lt;pre&gt;</u>	class dir id lang style	Display given text exactly the way it appears in the lines of code. For example any line breaks or spaces will be carried to the browser.	Yes!
<u>&lt;q&gt;</u>	class dir id lang style	Allows for inline text quotation.	No!

	title		
<u>&lt;select&gt;</u>	class dir disabled id multiple lang name size style tabindex title	Create a selection list to retrieve user input. Place within a form element to retrieve user input.	No!
<u>&lt;sub&gt;</u>	class dir id lang style title	Add a subscript to any paragraphs or text	No!
<u>&lt;sup&gt;</u>	class dir id lang style title	Add superscripted text to your site.	No!
<u>&lt;table&gt;</u>	align background bgcolor border bordercolor bordercolordark bordercolorlight cellpadding cellspacing class frame height hspace id lang nowrap style title valign vspace width	Create a table for layout or data presentation. Tables are the backbone of HTML documents as they provide a coherent method to organize your code and your websight itself.	No!
<u>&lt;td&gt;</u>	align background bgcolor border bordercolor bordercolordark bordercolorlight class height hspace id lang nowrap style title valign	Create a table data cell. Within these tags is where your actual content of the table will be placed.	No!

	vspace width		
<u>&lt;textarea&gt;</u>	accesskey class cols dir disabled id lang name readonly rows style tabindex title wrap	Creates a field to display code-like text. Very versatile, capable of retrieving user input via forms. Compatible in nearly every browser.	No!
<u>&lt;th&gt;</u>	align background bgcolor border bordercolor bordercolordark bordercolorlight class colspan height hspace id lang nowrap style title valign vspace width	Create table headers over each of your columns. Automatically bolds your headers and places them in the center of their corresponding cells.	No!
<u>&lt;title&gt;</u>	dir lang	Create a title for your site to be displayed in the browser's top heading. Placed within the "Head" element.	No!
<u>&lt;tr&gt;</u>	align background bgcolor border bordercolor bordercolordark bordercolorlight class height hspace id lang nowrap style title valign vspace width	Creates a table row for your tables. Each tag defines the start and end of a table row.	No!
<u>&lt;u&gt;</u>	class dir id lang style title	Underline your text. Great fast way to place emphasis on your text. Compatible with many browsers.	No!

<u>&lt;ul&gt;</u>	class dir id lang style type	Create unordered lists (bulleted lists).	No!
